

Neles™ V-port segment valve RE-series

Neles RE series V-port segment valves are economical high performance valves in a quarter-turn design. They are offered with a variety of trim options from standard and low Cv trims for general applications, to noise/cavitation Q-Trim™ for reducing aerodynamic noise and preventing cavitation. Standard units are equipped with either diaphragm or cylinder actuators and ND9000™ intelligent valve controllers for precise control, reliability and performance monitoring on-line.

FEATURES

Integral body construction

- Integrally flanged R-Series valves feature one piece body construction with no flange rings, inserts or end caps to create potential leak paths, even if the valve is subjected to pipe bending forces. Seating capabilities are totally unaffected by pipeline forces, which assures reliable valve operation.

Accurate control

- Carefully designed V-ported segment, low torque requirements and clearance-free movement result in good control performance. The design provides steady and gentle contact between the seat and segment at all times to minimize friction while providing tightness. Bearings are located inside the valve body providing larger bearing areas, lower bearing loads and longer bearing life.

Safety and environment

- Rotary operation reduces fugitive emissions dramatically compared to a sliding stem design.

Durable metal seat

- The seat of the R-series V-port segment valve is firm and uniquely durable. The seat is designed in such a way that its sealing surface is not located directly in the flow stream. This gives the seat an extended service life. The working principle is a pressure-aided seat which enables good sealing properties at a low pressure difference. The seat is located inside the valve, which prevents forces from the pipe system influencing the sealing effect. Two-way tight seat is available as an option.

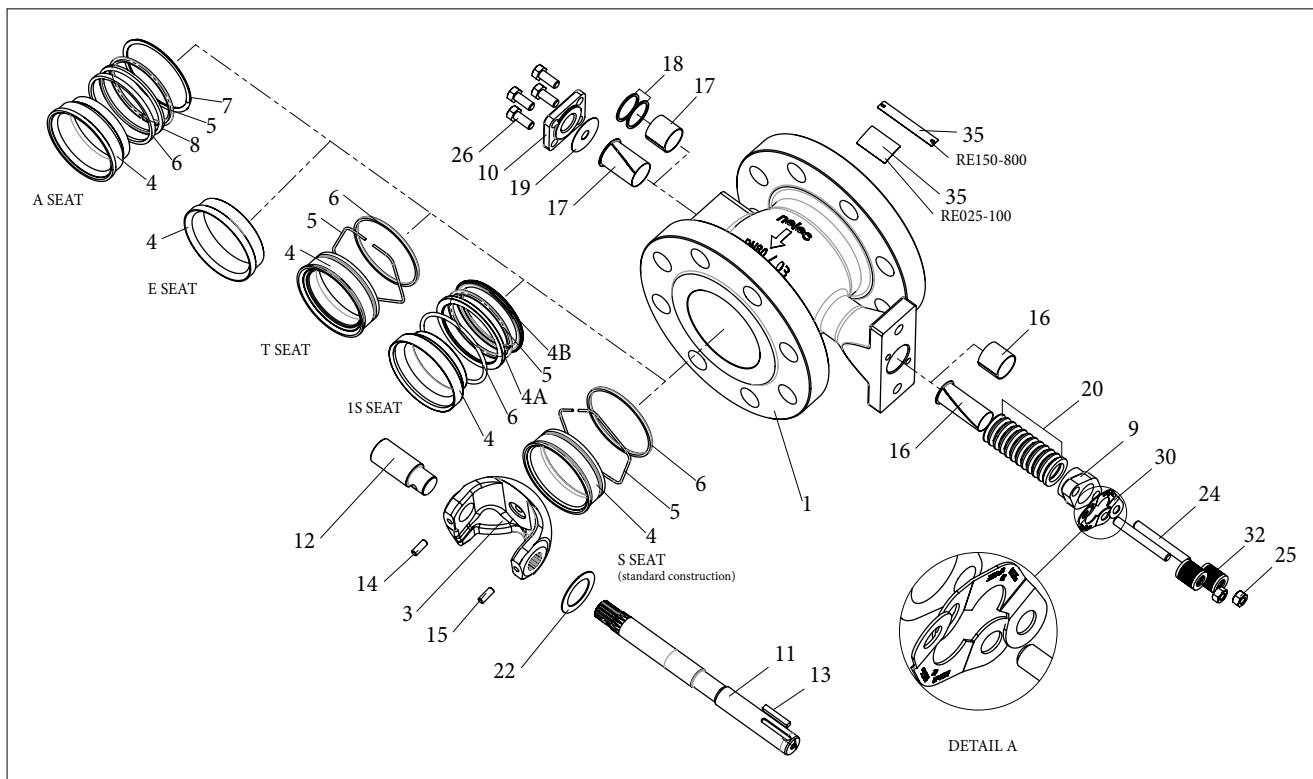

Economical

- Low torque requirements reduce wear, resulting in better reliability. In addition, standard designs carry hard chromium facing on the segment and cobalt based alloy seat, which has been designed to avoid the flow impingement. Together with low load bearing design and live-loaded packing, operational life is improved and maintenance needs are minimized. Low torque combined with the well integrated actuator design provides a lower cost valve unit.

Small flow and low noise/cavitation Q-Trim options

- DN25/1" valves feature five different segments. They extend the valves' application range to very low-flow high accuracy services, such as additive and coloring lines, pilot plants etc. Cavitation and aerodynamic noise are reduced with the patented Q-Trim option. This self-cleaning design handles contaminated flows (impure steam, river water, etc.) without plugging.

1) 100 % corresponds to 95° turning angle

2) For Q-R-valves, 100 % corresponds to 90° turning angle

Seat designs

S Metal seat

Seat:	316 SS + Cobalt based hard facing, sizes 1" - 20" / DN 32 - 800
Spring:	Inconel 625
Seat seal:	Filled PTFE lipseal / SS Elgiloy spring
Temp. range:	-52...+315 °C / -60 ...+599 °F
Service:	General

T Soft seat

Seat:	316 SS with PTFE + X-treme™, sizes 1" - 6" 316 SS with PTFE + C25 % insert, sizes 8" - 32"
Spring:	Inconel 625
Seat seal:	Filled PTFE lipseal
Back seal:	PTFE
Temp. range:	-52...+260 °C / -60 ...+500 °F
Service:	General service with tight shut-off.

E Non-tight metal seat

Seat:	Cobalt based alloy
Temp. range:	-80...+425 °C / -112 ...+797 °F
Service:	Extremely erosive applications, non-tight.
NOTE ! Flow direction is reversed.	

1S 2-way tight metal seat

Seat:	316 SS + Cobalt based hard facing, sizes 1" - 32" / DN 25 - 800
Spring:	Inconel 625
Seat seal:	Viton GF
Temp. range:	-30...+200 °C / -22 ...+392 °F
Service:	General

A High temp. metal seat

Seat:	A: SS 316 + Cobalt based hard facing A1: SS 316 + CrC facing (with K segment)
Spring:	Inconel 625
Seat seal:	Graphite
Temp. range:	-52...+425 °C, -60...+797 °F
Service:	General service
Note: Available in sizes 2", 3", and larger (not available in 2.5" size)	

Construction options

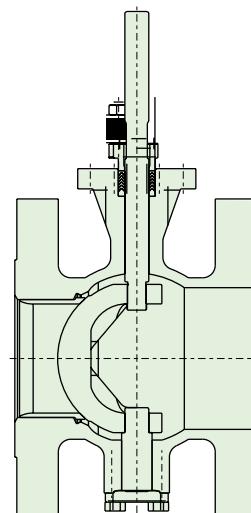

Low C_v trims

Reduced C_v trims are available on the DN25/1" valve to control very low flows with high accuracy. The narrow orifice is a selfflushing design because the trim orifice is continually increasing.

Q-trim™ valve trim for cavitation/noise abatement

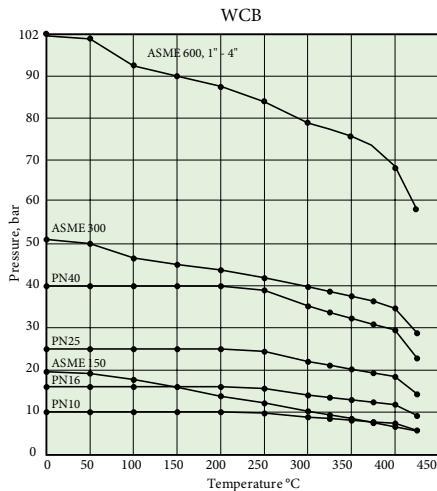

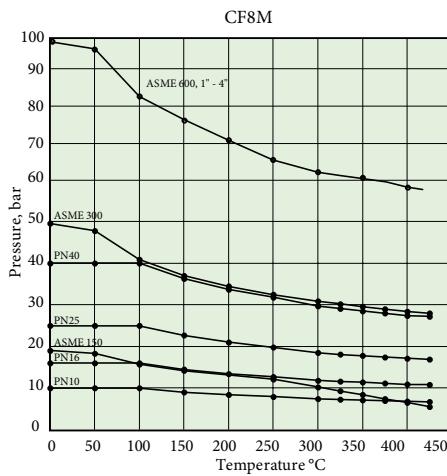

Liquid cavitation and aerodynamic noise problems can be solved with the patented Q-Trim™ valve trim. This design employs the two well-known principles of dividing the pressure drop into a series of small pressure drops and of separating the flow stream into many small jet streams. The use of these two principles combined with the rotation of the attenuator elements provides a combination of cavitation/noise abatement with high rangeability, high capacity and capability to handle impure fluids.

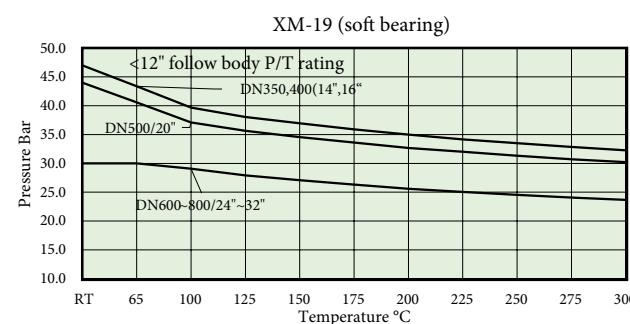

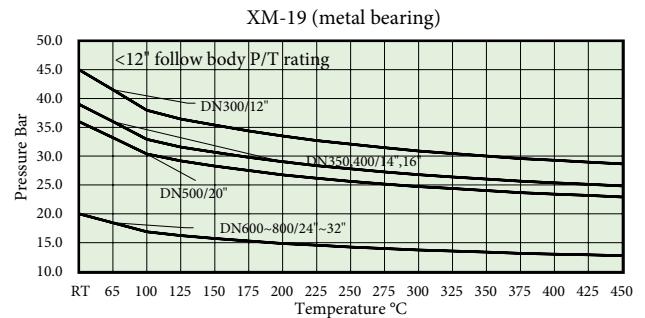

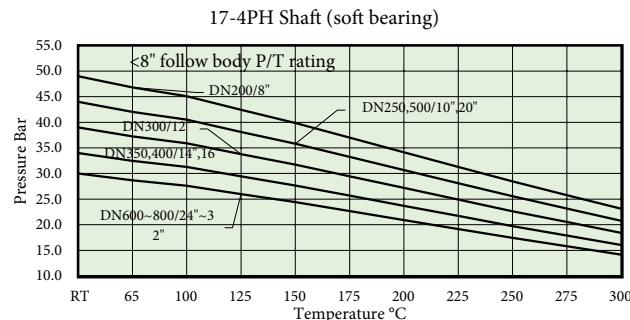

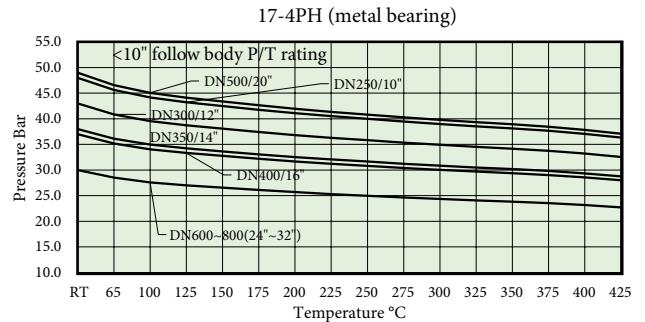

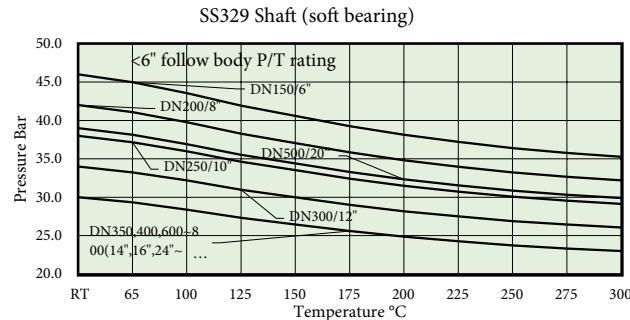

Erosion resistant version

This heavy duty erosion resistant design handles contaminated flows and abrasive media at a favorable cost/useable life ratio. The seat is machined from cobalt chromium alloy and the seat design is changed from normal to reverse flow for maximum abrasion resistance. This version should not be used for isolation service since the seat is not in contact with the segment.

Body pressure ratings

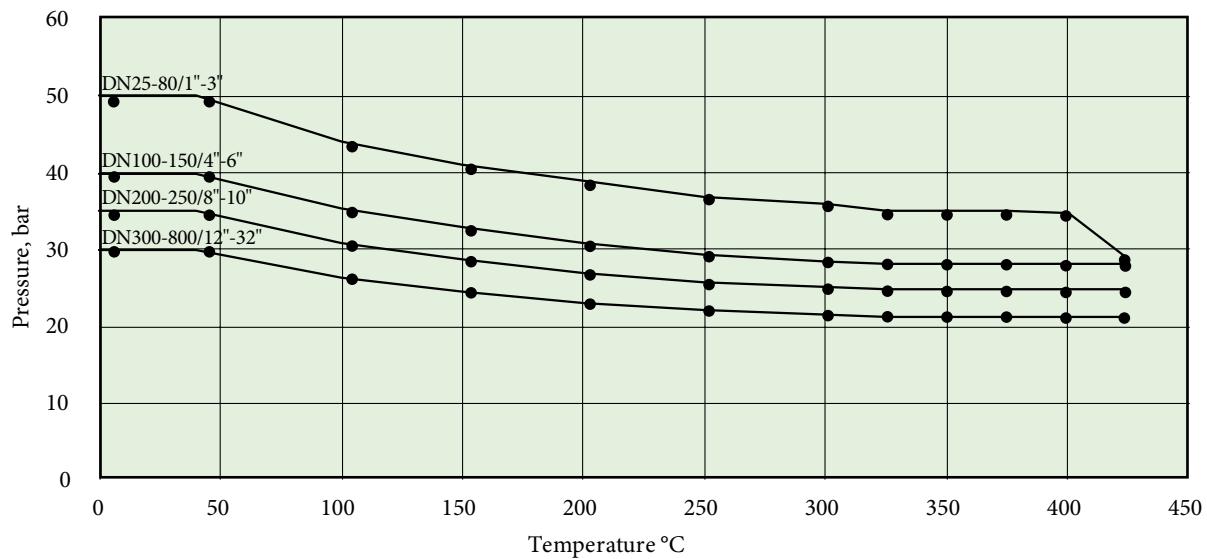

Maximum operating pressure differential in shut-off service

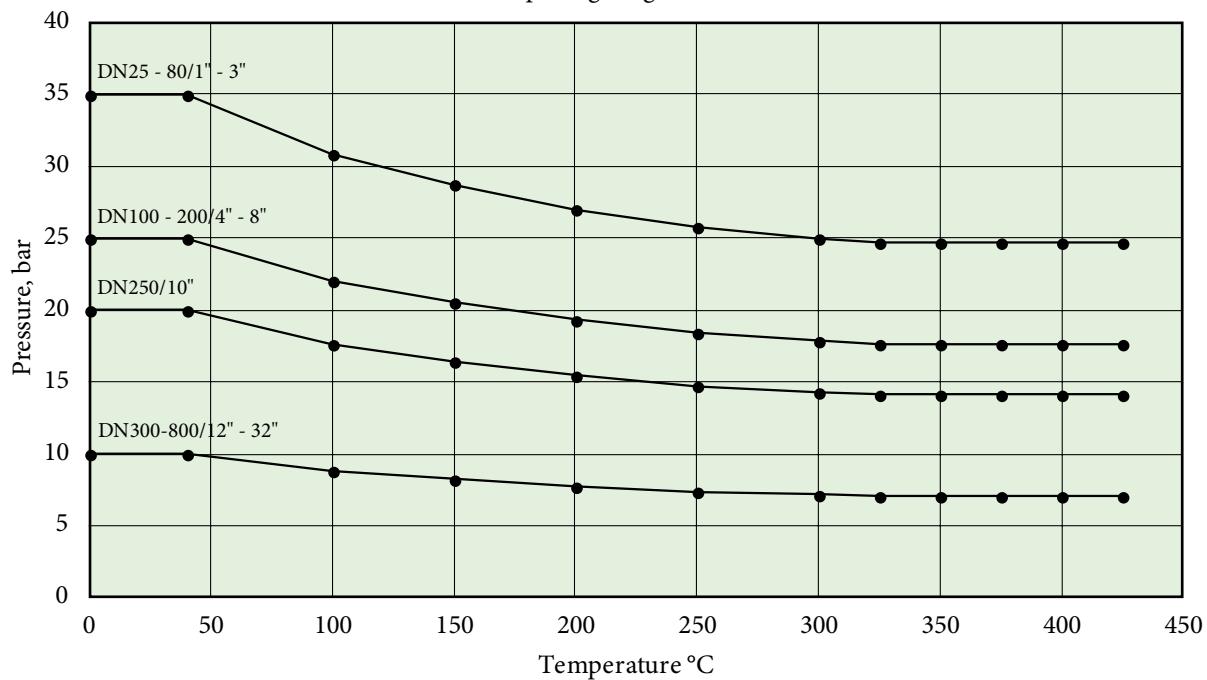

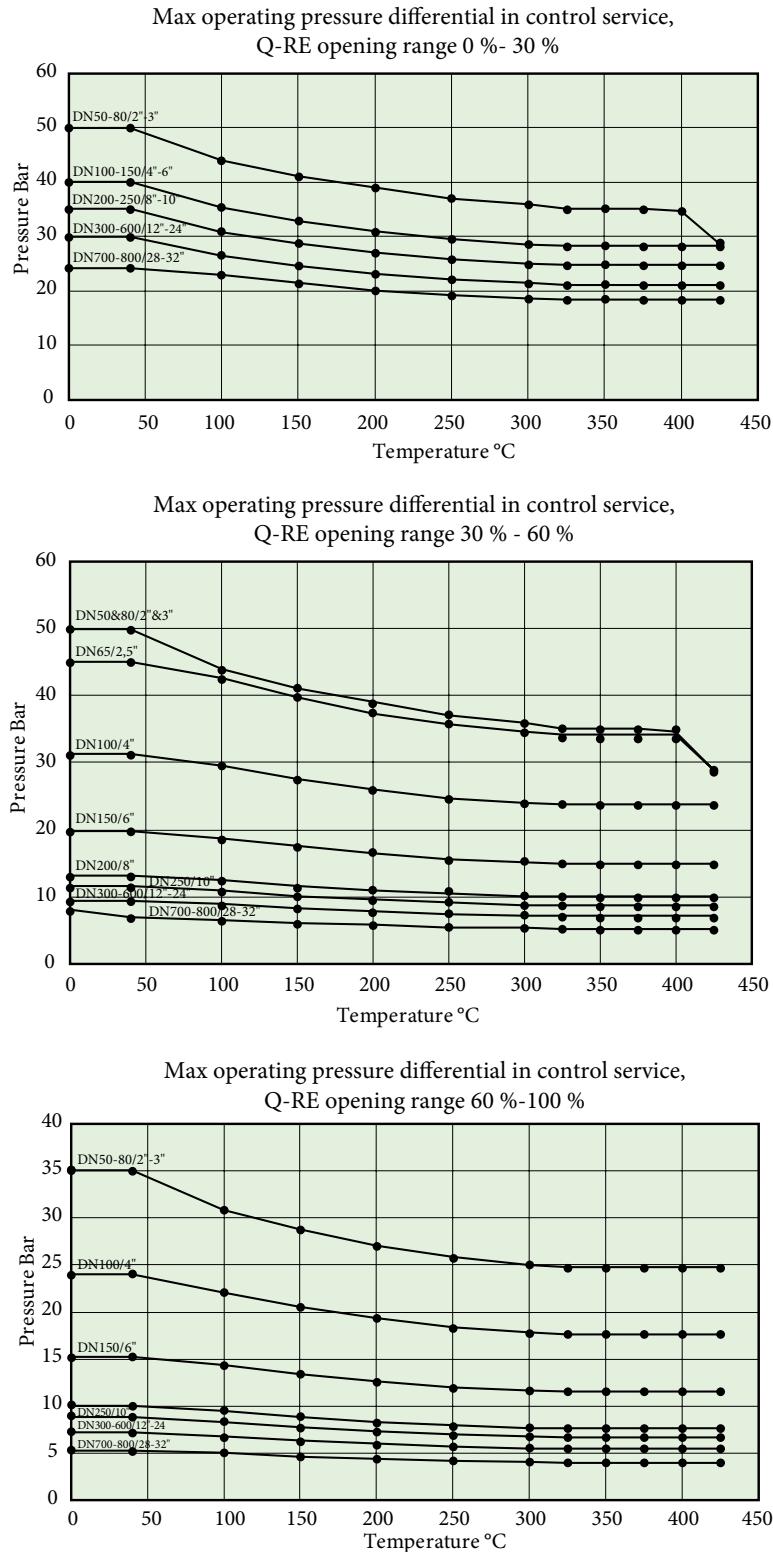

Note: Class 600 1", Max shut-off dp: 100bar
 Class 600 2"-3", Max shut-off dp: 80bar
 Class 600 4", Max shut-off dp: 60bar

Max operating pressure differential in control service, RE
opening range 0 %-70 %

Max operating pressure differential in control service,
RE opening range 70 %-100 %

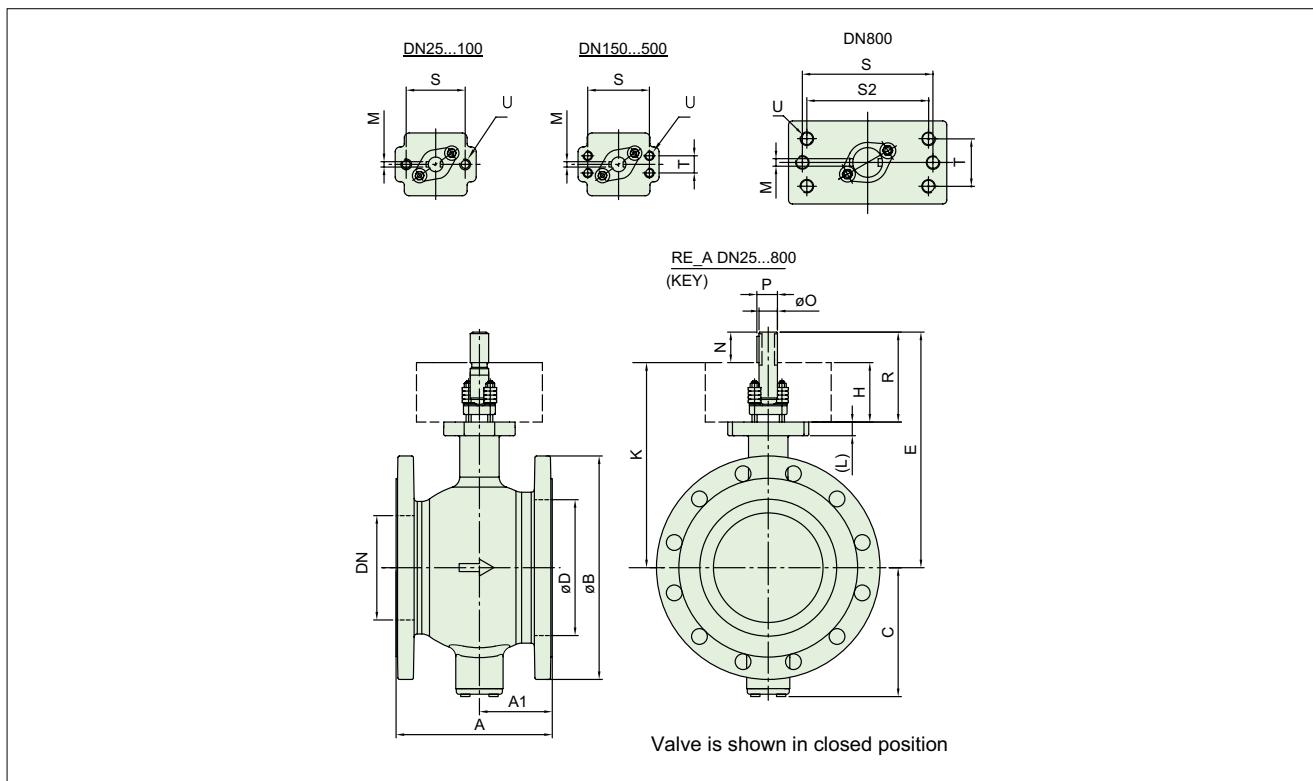

**Note:**

- 1) RE-valves are not recommended for applications with high on-off cycling rate. X- or L-series valves should be used in these cases.
- 2) Please observe body rating for material in question when determining maximum allowable shut-off pressure differential.

Given maximum allowable throttling differential pressures are based on mechanical strength of the parts only. Nelprof analysis determines actual throttling dp capability, taking into account trim velocity, exit velocity, noise and cavitation.

C005-	Maximum Cv = 0.5 (for DN 25 / 1" only)					S	Type AISI 329				
C015-	Maximum Cv = 1.5 (for DN 25 / 1" only)					K	CG8M + CrC				
C05-	Maximum Cv = 5.0 (for DN 25 / 1" only)					T	Titanium + ceramic coating				
C15-	Maximum Cv = 15.0 (for DN 25 / 1" only)					V	Titanium without coating				
2. Sign	Product series					8. Sign	Shaft, pin & bearing materials				
RE	Flanged one piece body, V-port segment, face-to-face acc. to ISA 75.08.02 and IEC 60534-3-2.					J	Type AISI 329 & PTFE on SS316 net				
						S	17-4 PH / Cobalt based alloy (max +425 °C)				
						T	Titanium / PVDF				
3. Sign	Pressure rating and flange drilling					9. Sign	Seat				
C	ASME 150 (1" - 32")					A	316 SS + cobalt based hard facing High temp. metal seat				
D	ASME 300 (1" - 32")					S	S 316 SS + Cobalt based hard facing, back seal PTFE lip seal				
F	ASME 600 (1"- 4")					S2	SS 316 + CrC hardfacing (with K segment)				
J	PN 10 (DN 200 - DN 800)					T2	X-treme, metal body, back seal PTFE lip seal, sizes 1"-6" PTFE+C25 %, metal body, back seal PTFE lip seal, size 8"-32"				
K	PN 16 (DN 100 - DN 800)					P	On-off metal seat				
L	PN 25 (DN 200 - DN 800)					E	Cobalt based alloy, erosion-resistant version non-tight				
M	PN 40 (DN 25 - DN 600)					1S	IS 316 SS + Cobalt based hard facing, 2-way tight metal seat				
R	JIS 10K flanges, based on body casting of ASME 300 (1" - 28")					A1	SS 316 + CrC hardfacing (with K segment)				
S	JIS 16K flanges, based on body casting of ASME 300 (1" - 28")					U	Titanium metal seat				
T	JIS 20K flanges, based on body casting of ASME 300 (1" - 28")					T5	Titanium soft seat				
4. Sign	Construction					10. Sign	Stem packing & blind flange seal				
A	Standard, drive shaft with ANSI keyway to actuator.					T	PTFE V-rings, live loaded				
Z	Oxygen construction - BAM listed non-metallic materials (only for Gaseous Oxygen Service) - Temperature: -50...+200 °C - Max pressure 20 bar or as per body rating, whichever is lower - Applicable body materials (6th sign): A, C - Applicable shaft/bearing (8th sign): J, N, S, C - Applicable seats (9th sign): S, S2 - Applicable packing (10th sign): G - Cleaning acc. to internal procedure Recommended type code: RE_Z_AJJS					G	Graphite rings, live loaded (fire-safe)				
5. Sign	Size					11. Sign	Model code				
	Inch 1", 1 1/2", 2", 2 1/2", 3", 4", 6", 8", 10", 12", 14", 16", 20", 24", 28", 32" DN 25, 40, 50, 65, 80, 100, 150, 200, 250, 300, 350, 400, 500, 600, 700, 800					-	Version - is used only with NPS1, NPS1H, NPS2H and NPS12 and above / DN25, DN40, DN65 and DN300 and above				
						A	Version A is used only with NPS02, NPS03-10 / DN50, DN80-DN250				
6. Sign	Body & screw materials					12. Sign	Flange facing				
D	ASTM A216 gr. WCB / 1-0619					/ -	ASME B16.5 (Ra 3.2 – 6.3 / RMS 125-250) Cover EN1092-1 Type B1				
D1	ASTM A 216 gr WCB Nitrated (US market only).										
A	ASTM A351 gr. CF8M / 1.4408										
C	ASTM A351 gr. CG8M										
T	Titanium										

Note: Bodies have double material marking.
